

Insurance Operations

AI operating layer for claims intake, agent guidance, new-hire coaching, and manager visibility.

20-50%

less manual coordination

42

open cases in cockpit demo

37%

delays from estimate bottlenecks

CLIENT SITUATION

The insurer already had claims software, CRM, policy database, email and WhatsApp channels, plus document folders and approvals.

- Scattered evidence
- Inconsistent responses

ZAD LAYER ADDED

ZAD sat above existing systems and structured work signals while keeping the claims platform as source of truth.

- AI intake and routing
- Agent response assistant
- In-workflow new-hire coach

WORKFLOW TRANSFORMATION

INCOMING CHANNELS

Email, WhatsApp, forms, PDFs, photos

->

ZAD AI LAYER

Extracts, classifies, drafts, flags and routes

->

EXISTING SYSTEM

Claims platform remains source of truth

OPERATIONAL SIGNAL

Repair estimates were the dominant delay driver. Two garages showed slower turnaround than peers.

- Garage A avg delay: 3.8 days
- Garage B avg delay: 2.9 days
- Garage C avg delay: 0.9 days

RECOMMENDED ACTION

Create a fast-estimate lane with auto-reminders after 24h, SLA escalation, and urgent routing to faster partners.

- Faster claims cycle
- Better customer updates
- Clear partner governance

STRATEGIC VALUE The AI layer does not just process claims. It reveals choices that reduce delay and improve service.
